

Supported voices and languages

Text-to-Speech provides the following voices. The list includes standard, [WaveNet](/text-to-speech/docs/wavenet) (/text-to-speech/docs/wavenet), and [Neural2](/text-to-speech/docs/wavenet#neural2_voices_preview) (/text-to-speech/docs/wavenet#neural2_voices_preview) voices. WaveNet and Neural2 voices are higher quality voices with different [pricing](/text-to-speech/pricing) (/text-to-speech/pricing); in the list, they have the voice type 'WaveNet' or 'Neural2'.

To use these voices to create synthetic speech, see how to [create synthetic voice audio](/text-to-speech/docs/create-audio) (/text-to-speech/docs/create-audio).

Note: You can also create a list of these voices by calling the [voices:list](/text-to-speech/docs/reference/rest/v1/voices/list) (/text-to-speech/docs/reference/rest/v1/voices/list) endpoint of the API.
